Software Engineer

As a seasoned full-stack software developer with 7 years of experience, I specialize in front-end development but am equally adept at handling back-end tasks. My expertise spans a range of technologies, including Ruby on Rails, JavaScript, Node, and React. I am passionate about creating intuitive, responsive user interfaces while ensuring seamless integration with back-end systems.

Technologies

Technologies: HTML, CSS, Tailwind, Bootstrap, MaterialUI, JavaScript, React, Node.js, Express.js, SQL (PostgreSQL, MariaDB), Ruby/Rails, Git, GCP, Rest API, JSON, Scrum/Agile

Frontend Technologies: fe

Backend Technologies: be

DevOps: Docker, GCP, CI/CD

Tools/Other: o

Experience

Infinite Blue, Software Engineer

Audobon, PA

- Clustering algorithm
- asd
- asd

2023 – 2024
1 year

Onepak, Software Developer

Boston, MA

- Implemented a new B2C application, taking it from concept to MVP employing React. Zeplin was utilized as a key tool to work with mockups, ensuring pixel-perfect implementation of the design elements and maintaining a cohesive user interface.
- Maintained and optimized logistical software for multiple B2B applications responsible for recycling technological equipment for industry leaders such as Dell and Hewlett Packard.
- Collaborated closely with design and marketing teams, translating their vision and requirements into a functional and visually appealing application.

2022 – 2023
1 year

Implico, Software Developer

Blue Bell, PA

- Designed, implemented, and maintained a suite of applications for internal use utilizing the PERN stack at Sam's Club, critical to the everyday operations in the fuels division implementation of the design elements and maintaining a cohesive user interface.
- Created iOS/Android mobile application to accompany software suite, nationally utilized by truck drivers to assist with pickup and deliveries.
- Produced series of SAP Fiori front end applications using SAP Web IDE to track and maintain master data tables and configuration.
- Implemented SSH and IPsec configuration to update fuel measurements of Sam's Club stations, essential to forecasting and fuel tracking.
- Completed front end overhaul of receipt tracking application used by companies such as Walmart and Phillips 66.

2018 – 2022
4 years

- Constructed interface utilizing Express.js to interact with SAP and Suncor Energy systems responsible for managing day-to-day fuel logistics

Education

Flatiron School , Software Engineering	2017 – 2017
• Rigorous bootcamp program teaching students software engineering.	
New Jersey Institute of Technology , Mechanical Engineering	2016 – 2018
Temple University , History	2011 – 2015
