## Summary

---

Full-stack software developer with 7 years of experience, equally enthusiastic about front-end and back-end work. Specializing in React, I am passionate about building intuitive and responsive user interfaces while also enjoying the challenges of backend development. Skilled in a variety of technologies, I thrive on finding innovative solutions and continuously improving processes across the stack.

## Technologies

---

**Skills:** Javascript/Typescript, React, Node.js, Google Cloud Platform, SQL (PostgreSQL, MariaDB), Git, HTML/CSS

## Experience

---

### Infinite Blue, Software Engineer

Audobon, PA  
2023 – 2024  
1 year

- Developed, updated, and maintained key components of an enterprise resilience application, working with multiple microservices, micro frontends. This was done primarily through utilizing React, Node, Pulsar, PostgreSQL, and GraphQL. These services were designed to streamline and enhance business responses to catastrophic events, ensuring robust and efficient disaster management.
- Implemented algorithm to cluster business threats, grouping assessed risks and utilizing pub/sub with Pulsar to generate and store threat data in a database. This data was then accessed via GraphQL and visually represented on a map using React, providing a clear, actionable view of potential threats.
- Created REST API delta endpoint, significantly increasing upload speed for bulk data submitted by customers.
- Archived critical data using Node and SQL queries, meeting contractual obligations and enabling the generation of reports. These reports provided customers with valuable insights into threats to their company and allowed them to access unique threat data for future analysis.

### Onepak, Software Developer

Boston, MA  
2022 – 2023  
1 year

- Implemented a new B2C application, taking it from concept to MVP employing React. Zeplin was utilized as a key tool to work with mockups, ensuring pixel-perfect implementation of the design elements and maintaining a cohesive user interface.
- Maintained and optimized logistical software for multiple B2B applications responsible for recycling technological equipment for industry leaders such as Dell and Hewlett Packard.
- Collaborated closely with design and marketing teams, translating their vision and requirements into a functional and visually appealing application.

### Implico, Software Developer

Blue Bell, PA  
2018 – 2022  
4 years

- Designed, implemented, and maintained a suite of applications for internal use utilizing the PERN stack at Sam's Club, critical to the everyday operations in the fuels division implementation of the design elements and maintaining a cohesive user interface.
- Created iOS/Android mobile application to accompany software suite, nationally utilized by truck drivers to assist with pickup and deliveries.
- Produced series of SAP Fiori front end applications using SAP Web IDE to track and maintain master data tables and configuration.
- Implemented SSH and IPsec configuration to update fuel measurements of Sam's

Club stations, essential to forecasting and fuel tracking.

- Completed front end overhaul of receipt tracking application used by companies such as Walmart and Phillips 66.
- Constructed interface utilizing Express.js to interact with SAP and Suncor Energy systems responsible for managing day-to-day fuel logistics

## Education

---

**Flatiron School**, Software Engineering

2017 – 2017

- Rigorous bootcamp program teaching students software engineering.

**New Jersey Institute of Technology**, Mechanical Engineering

2016 – 2018

**Temple University**, History

2011 – 2015
